4G Kids GPS Watch Sample Evaluation: A119H vs A36E

A model-level sample plan for distributors, private-label brands and integrators evaluating a kids GPS watch. Start with A119H or A36E, then approve the exact carrier, firmware and guardian-app configuration before a volume order.

A119H Android 4G GPS Kids Smartwatch with SOS & Camera

A36E Android 4G GPS Kids Smartwatch with SOS & Camera

Reference	A119H	A36E
Platform	ASR8601	8521
Display	2.02-inch touch screen	1.54-inch IPS, 320 x 320
Battery reference	1000 mAh	700 mAh
Camera reference	Camera listed; resolution to confirm	2.0 MP
Wi-Fi / Bluetooth	802.11b/g/n / BT4.0	802.11b/g/n / BT4.0
Use-case shortlist	Larger-screen family communication	Compact-screen family communication

Reference configurations, not a final production specification. Battery capacity does not establish operating runtime. MOQ, lead time, certification scope, app/server fees and customization are confirmed in a written quotation.

Product references: A119H | A36E

Sample acceptance worksheet

Agree the acceptance criteria before testing. This is a blank protocol, not a completed test report or proof that a model passed.

Test	Procedure	Record / evidence
Hardware identity	Record model, hardware revision, firmware build, IMEI and app version. Match each sample to its quotation and band sheet.	Photographs, firmware version and signed specification
SIM and network	Use the buyer-selected SIM in the destination country. Check activation, APN, data reconnection and two-way calls under the intended carrier plan.	Operator, SIM plan, activation result and call log
Positioning and geofence	Compare location reports outdoors, indoors and at the proposed geofence boundary. Record the actual time, reference position and reporting interval.	Map screenshots and timestamped event record
SOS and contact controls	Test approved contacts, SOS initiation, guardian notification, acknowledgement and retry behavior. Use a controlled test, never an emergency-services number.	Recipient, alert timestamps and missed-alert notes
Guardian app and access	Check language, pairing, permissions, account recovery, unbinding and the handling of location history. Confirm who operates the app and server.	App version, permission screenshots and account workflow
Battery and charging	Run a repeatable usage profile: calls, positioning interval, screen activity and signal conditions. Measure rather than infer runtime from battery capacity.	Start/end charge, elapsed time and usage profile
Production readiness	Confirm the exact model documents, packaging, logo, language, accessories, warranty and sample-to-production change control.	Approved sample record and quotation attachments

Buyer acceptance criteria: _____

Sample / firmware / app: _____

Tester / date / destination operator: _____

No country-wide or named-carrier compatibility is guaranteed by a model name. A catalogue band list is not proof of SIM activation, VoLTE approval or market certification. Do not combine band lists from different hardware versions.

Prepare a useful quotation request

Copy these fields into your email or WhatsApp message. Send only the project information you are comfortable sharing; customer records and identity documents are not needed.

Project field	Your requirement
Preferred model / alternative	_____
Destination country and operator	_____
Trial quantity / planned order	_____
Required functions and languages	_____
Logo / packaging / accessories	_____
App / server / API arrangement	_____
Required model documents	_____
Target sample and launch dates	_____
Other acceptance requirements	_____

Ask GALAX to confirm: exact hardware and firmware; model-specific band sheet; sample and volume MOQ; itemized pricing; sample and production lead times; relevant documentation; app/server fees; warranty and after-sales responsibilities.
